

## **Hazel Wood Fence – Specification**

### **Application**

- The hazel wood fence is designed for outdoor use as a decorative and functional element in gardens, on terraces, or on plots of land.
- It is used to mark spaces in the garden, such as flower beds, pathways, or green zones, and can also serve as an enclosure for animals.

### **Safe Use**

- The fence is connected with galvanized wire, ensuring a durable construction. Caution is advised, as protruding wire fragments may pose a risk of injury. Before installation, it is recommended to inspect the edges and secure any exposed elements if necessary.
- The wooden stakes used in the fence are sharpened. Care should be taken during installation to prevent injuries.
- Secure anchoring of the fence in the ground is crucial for safe use. Improper installation may cause the fence to fall, especially in strong winds.
- The fence is mounted on hazel posts using wire or similar fasteners. Protective gloves are recommended to minimize the risk of injury.

### **Maintenance**

- Hazel wood is a natural material exposed to weather conditions. To extend its lifespan, it is recommended to treat the surface with a wood preservative or clear lacquer.
- The fence should not be cleaned with strong detergents, as they may damage the wood structure and the protective layer of the wire. In case of dirt, simply wipe the surface with a damp cloth.
- Prolonged exposure to moisture (e.g., heavy rainfall) can weaken the wood. It is advisable to place the fence in an area with good air circulation to speed up drying.
- Once per season, it is worth checking the condition of the fence and the connecting wire to detect any potential damage and prevent further deterioration.

### **Warnings**

- This product is not designed for leaning on or climbing – doing so may damage the fence and pose a safety risk to the user.
- Exercise caution during installation – do not point the sharp ends of the stakes toward yourself or others.
- When handling and assembling the fence, be mindful of the connecting wire – its edges may be sharp and require extra caution.
